DOUBLE HAMMER MILL SKID

Sudenga.[®]
INDUSTRIES, INC.

Sudenga's double hammer mill skid creates a high capacity grinding solution with an automated start and stop function. A controlled flow-rate for the hammer mills and auto level-sensing that allows this system to call for more grain once the surge levels get low will keep your operation moving.

- Increase your grinding capacity with a double hammer mill skid.
- Includes surge hopper above the two hammer mills with dual feeder augers for maximizing the capacity of the two hammer mills.
- Integrated level sensors in the surge hopper regulate the operation of the whole-grain augers.
- A Sudenga motor control panel helps optimize grinding efficiency while providing precise control.
