

Grain Halo Sump Guard

Sudenga

Sudenga's Grain Halo Sump Guard helps keep grain moving by breaking up crusted grain and larger clumps before they can restrict flow at the center sump. Mounted above the sweep gearbox, it stays connected throughout unloading and travels with the sweep as it moves.

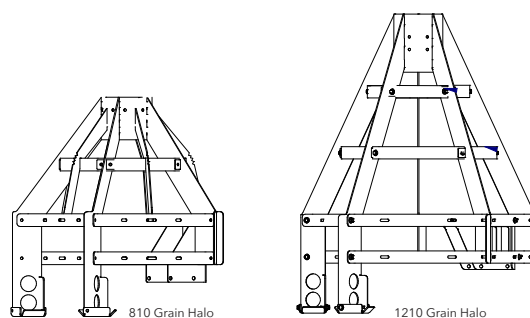

FEATURES & BENEFITS

- Helps prevent grain clumps from restricting the center sump
- Supports more consistent grain flow during unloading
- Designed for crusted, compacted, or difficult-to-move grain
- Transfers grain pressure to the bin floor instead of the sweep gearbox
- Lifts from the floor and travels with the sweep as the bin empties
- Available in two sizes.
